		IB Pulse	23

1 – Introduction

Description

The IB Pulse provides a complete analysis of 12-volt and 6-volt vehicle batteries and 12-volt and 24-Volt starting/charging systems. Using patented conductance technology, the IB Pulse will display battery condition (Good, Replace, Good-Recheck Soon, etc.) as well as voltage and available cranking power based on the temperature of the battery. The IB Pulse can perform battery tests on Automobile, Group 31, Lawn & Garden, Marine, Powersports and Commercial 4D/8D batteries.

The IB Pulse integrates the in-vehicle battery test along with the starting and charging system test. The charging system analysis takes multiple measurements while the charging system is exercised under varying conditions to determine if it can charge the battery while supplying the necessary power for the electrical system. Test results can be displayed on the full-color screen, printed, or via email.

Personal Precautions

DANGER

Risk of explosive gases.
Never smoke or allow a spark or flame in the vicinity of a battery.

Batteries can produce a highly explosive mix of hydrogen gas and oxygen, even when the battery is not in operation. Always work in a well-ventilated area.

WARNING

PROPOSITION 65 WARNING: Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer and reproductive harm. Batteries also contain other chemicals known to the state of California to cause cancer. Wash hands after handling.

Inspect the battery for damage and check the electrolyte level. If the electrolyte level is too low, replenish it and fully charge the battery. Always use the necessary safety precautions when working with batteries to prevent severe injury or death. Follow all manufacturers' instructions and BCI (Battery Council International) safety recommendations, which include the following precautions:

- Battery acid is highly corrosive. If acid enters your eyes, immediately flush them thoroughly with cold running water for at least 15 minutes and seek medical attention. If battery acid gets on your skin or clothing, wash immediately with a mixture of water and baking soda.
- Always wear proper safety glasses or face shield when working with or around batteries.
- Keep hair, hands, and clothing as well as the tester cords and cables away from moving engine parts.
- Remove any jewelry or watches before you start servicing the battery.
- Use caution when working with metallic tools to prevent sparks or short circuits.
- Never lean over a battery when testing, charging, or jump starting.

Testing Out-of-Vehicle

The preferred battery test location is in the vehicle. However when testing out of the vehicle:

- Always disconnect the negative cable from the battery first and reconnect it last.
- Always use a carry tool or strap to lift and transport the battery.

WARNING

Failure to properly install lead terminal adapters, or using adapters that are dirty or worn, may cause false test results.

When testing side-post or Group 31 batteries, always use lead terminal adapters provided with the tester—do not test at the battery's steel bolts. To avoid damage, never use a wrench to tighten the adapters more than ¼ turn.

Testing In-Vehicle

The preferred test position is at the battery posts. If you must test at a remote-post location, it should have both a positive and negative post. Otherwise, you must remove the battery and perform an out-of-vehicle test.

At the start of the test, make sure all vehicle accessory loads are off, the key is not in the ignition, and the doors are closed.

Connecting To A Battery

CAUTION

Do not connect the tester to a voltage source greater than 30 Vdc.

Connect the clamps to the tester: the red clamp to the positive (+) terminal and the black clamp to the negative (-) terminal.

If you connect the clamps in the wrong polarity (positive to negative or negative to positive), the tester displays CLAMPS REVERSED! Reconnect the clamps.

To make sure both sides of the clamps are gripping the terminals, rock each clamp back and forth. A poor connection will prevent testing, and the tester will display the message CHECK CONNECTION. If the message reappears after you have correctly reconnected the clamps, clean the terminals and reconnect.

Symbols Conventions

Symbol	Description
	The safety symbol with the words CAUTION, WARNING, or DANGER indicates instructions for avoiding hazardous conditions and personal injury.
	The wrench symbol indicates procedural notes and helpful information.

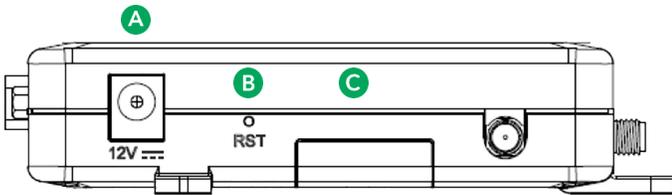

Wi-Fi Hub

The Wi-Fi Hub is required at every shop using an IB Pulse battery tester. The Hub transmits its own Wi-Fi signal and easily connects to existing Internet hardware devices. Once paired with an IB Pulse, it automatically downloads local shop information; transmits test data wirelessly to a printer or via email; and allows IB Pulse software updates.

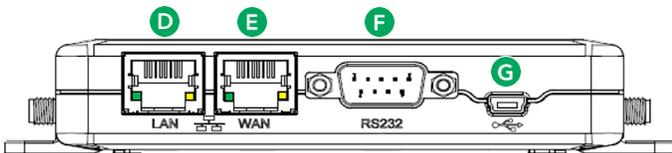

Included Components

- IB Pulse Wi-Fi Hub
- Four (4) Antennas
- 10 ft Ethernet cable
- Power Supply
- Quick Start Guide

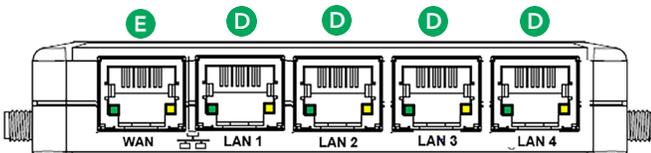

Connections

- A 12V Power Supply:** Utilize the power supply included with the Wi-Fi Hub. Any other power supply can cause damage to the unit.
- B Reset Button:** Push & release to reset the device. Push & hold for 5 seconds, then release to install factory presets.
- C SIM Card Access:** Slide the door to access the SIM holder.

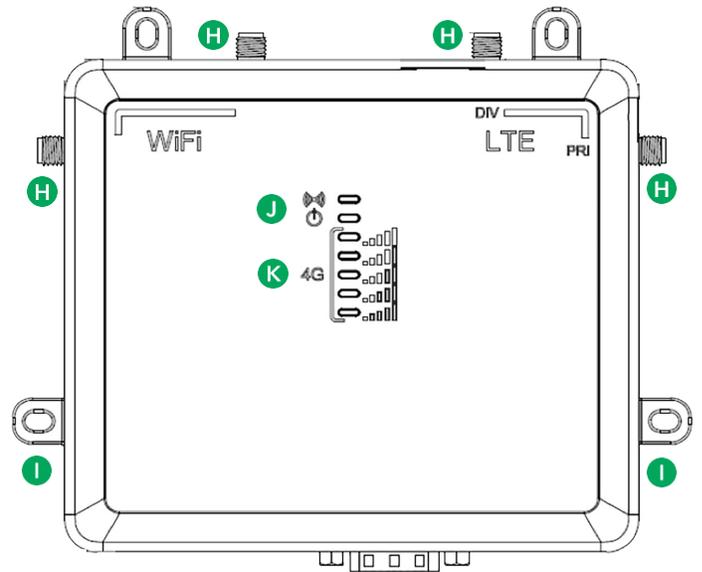

Version 1

Version 2

- D LAN Port(s):** NOT USED
- E WAN Port:** Utilize the WAN port on the front of the Wi-Fi Hub and connect the open WAN port on the existing shop router using the supplied Ethernet cable. Solid Green indicates link has been established with stores router, flashing green indicates data is being transmitted.
- F RS-232 Port:** NOT USED IN VERSION 2
- G USB Port:** NOT USED IN VERSION 2

- H Antennas:** The Hub includes easy to attach and adjust antennas for maximum reception.
- I Mounting Holes:** Use the mounting holes to attach the Wi-Fi Hub to a wall or secure location.

NOTE: Screws not included.

- J (Wi-Fi) Wi-Fi:** Orange: Wi-Fi is connected / Off: No Wi-Fi
- Power:** Yellow: Power is connected / Off: unit is off
- K Signal Strength:** Indicates the level of cellular signal.
 - One (1) green bar: Signal is poor
 - Five (5) green bars: Signal is very strong.

Wi-Fi Hub Location

- **Select a central location:** The Wi-Fi Hub communicates in all directions. To optimize coverage, place the device in a central location where the IB Pulse will be used. Avoid placing in a closet or behind concrete walls.
- **Raise the Hub:** The Hub signal angles downward, so mount the Wi-Fi Hub as high as possible to maximize coverage.
- **Avoid other electronics:** Select a location away from other electronics and large metal objects.

Wi-Fi Hub Installation

1. Hand-tighten the four antennas. For best coverage, position the antennas at a 45-degree angle from the base.
2. Plug the power supply into the Wi-Fi Hub and into a wall outlet.

NOTE: Select a non-switched outlet that is not powered off at night.

3. Insert the Ethernet cord cable into the WAN port on the front of the Hub and into an open port on your router. If a longer cable is required, ensure it is a CAT-5, CAT-5e, or CAT-6 type.
4. The Wi-Fi Hub boots up and automatically connects to the Internet.

NOTE: The start-up process may take up to five (5) minutes.

Wi-Fi Hub Troubleshooting

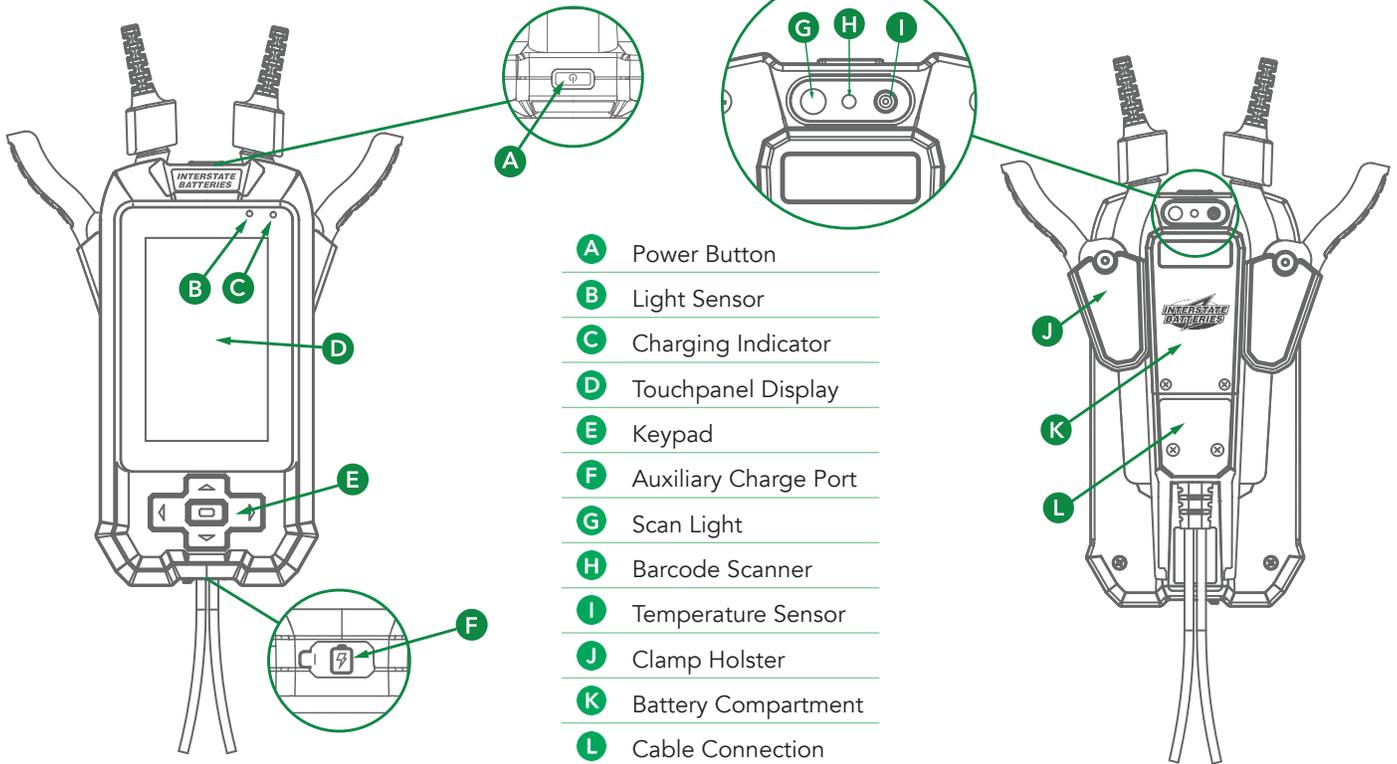

The following troubleshooting information is not inclusive and is meant as a guide only. Other issues and solutions may arise that are not stated here. The following description of terms are provided for reference as used in the following troubleshooting chart.

Issue	Probable Cause	Remedy
No lights displaying on front of Wi-Fi Hub	Device is not connected to a power source	<ul style="list-style-type: none"> • Check power source connection • If there is no LED activity, unplug the device and wait several minutes before restarting
No red light, amber light on Red light on, amber light off No green lights displayed	Not connecting to the Internet	<ul style="list-style-type: none"> • Check Hub connection and setup • Check Ethernet WAN connections • Unplug the Wi-Fi Hub and wait several minutes before restarting
Wi-Fi connection drops or disconnects intermittently	Wi-Fi signal strength insufficient	<ul style="list-style-type: none"> • Check Wi-Fi strength • Ensure all antennas are securely attached • Move Wi-Fi Hub to a more central location • Move away from interference from metal objects and walls
Cannot email battery test results	IB Pulse is not connected to the Wi-Fi Hub	<ul style="list-style-type: none"> • Check Hub connection and setup • Move closer to the Wi-Fi Hub • Check Ethernet WAN connections • Unplug the Wi-Fi Hub and wait several minutes before restarting • Delete the Wi-Fi Hub and then reconnect
Dealer/Shop information did not download to IB Pulse	IB Pulse is not connected to the Wi-Fi Hub	<ul style="list-style-type: none"> • Check Hub connection and setup • Check Ethernet connections • Unplug the Wi-Fi Hub and wait several minutes before restarting • Delete the Wi-Fi Hub and then reconnect
Software update doesn't complete or shows unavailable	IB Pulse is not connected to the Wi-Fi Hub	<ul style="list-style-type: none"> • Check Hub connection and setup • Ensure IB Pulse is charged at a minimum of 40% • Place IB Pulse in charging dock during update attempt • Check Ethernet connections • Unplug the Wi-Fi Hub and wait several minutes before restarting
No Wi-Fi Hub listed in the Wi-Fi section of the IB Pulse	Wi-Fi Hub was never paired during setup	<ul style="list-style-type: none"> • Connect Wi-Fi Hub • Go to Setting, then Wi-Fi and select the plus "+" button • Select available Hub listed in section. Displayed in a HUB-xxxxxxx format.

IB Pulse

Front

Back

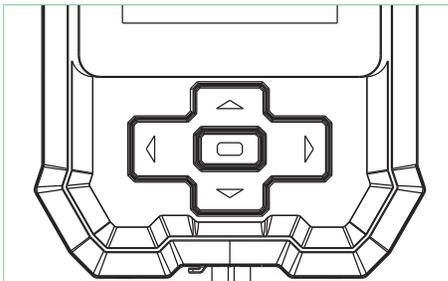

Navigation

The IB Pulse features a touch screen for accessing various functions and options.

The arrow buttons (▲▼◀▶) at the bottom of the tool can also be used for highlighting and selecting.

Press **■** to enter a selection.

Initial IB Pulse Power Up

1. Press the I/O Power button on the top of the tester to power it up.
2. Select **Next >** to begin the setup process.

3. **Date Time:** Select the correct time zone, date, and time and select **Next >**.

NOTE: Time zone, date, and time must be correctly set in order for the IB Pulse to connect to the WI-FI Hub.

4. **Connect To Hub:** When only one HUB is detected, the tool automatically detects and configures to the HUB. If more than one HUB is available, identify the last 4 digits of the HUB IMEI (on the back label) and select from the displayed list.

Once connected, the tester automatically searches for any software updates.

5. **Software Update:** Installs any available updates.

6. Add Bluetooth Printer (Optional Equipment): Select **Yes** to add.
 - Turn the printer on.
 - Tap the displayed printer name to select it.
 - Tap **Next >** to connect.
 - A confirmation message is displayed when successful.

NOTE: Not all Wi-Fi and Bluetooth printers are supported by the IB Pulse. For a complete list of supported printers, go to:
www.interstatebatteries.com/ibpulse

Add Wi-Fi Printer (Optional Equipment): Select **Yes** to add.

NOTE: A Wi-Fi Printer can be added at any time once the IB Pulse setup process is complete. See "Printers" in Chapter 4 - Menu -> Settings.

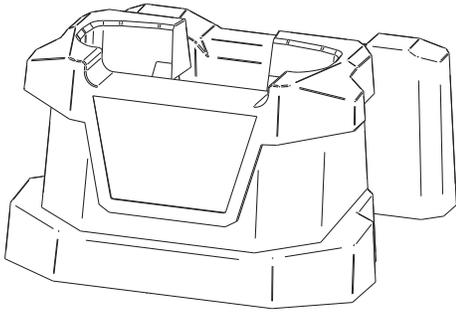

- A confirmation message is displayed when successful.
7. Shop Info: Review and edit information as needed. The information listed will appear on battery test, emails, and print outs
 8. Complete: The Complete screen is displayed at the end of the setup process. Select the **Begin** checkmark to continue.
The Home Screen is displayed.

Setting User Preferences

Refer to *Chapter 5 - Menu -> Settings* (⚙️) to adjust the IB Pulse default setting and parameters.

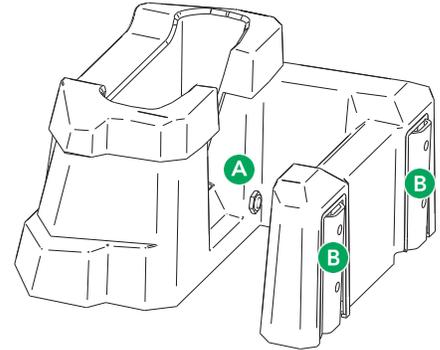

Charging Dock

Front

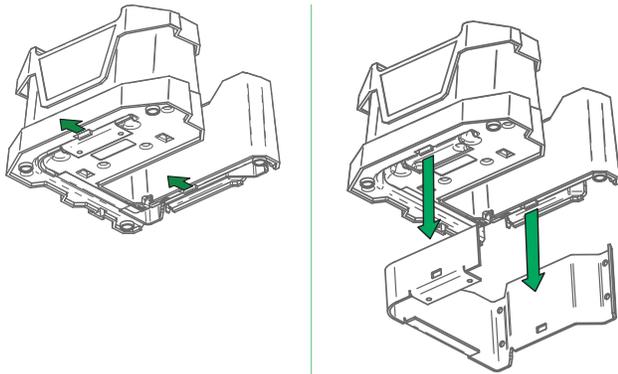

- A** Power Supply Connection
- B** Wall Mounting Bracket

Side

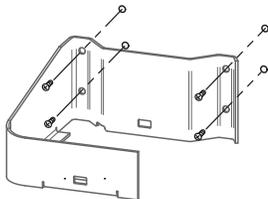

Charging Dock Mounting (Optional)

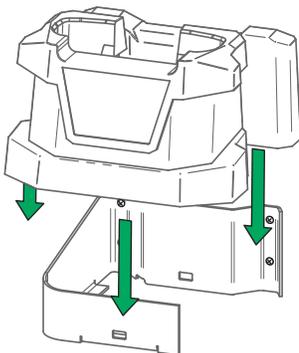

1. Release the two (2) holding tabs on the bottom of the Charging Dock to remove the wall mounting plate.

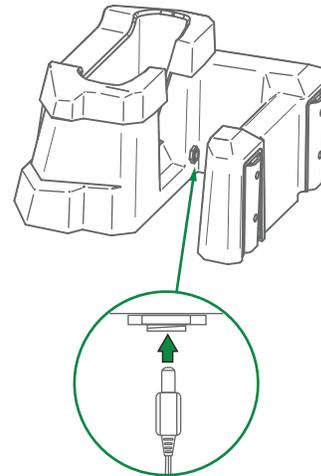

2. Use four (4) screws to securely mount the plate onto a wall or other vertical surface.

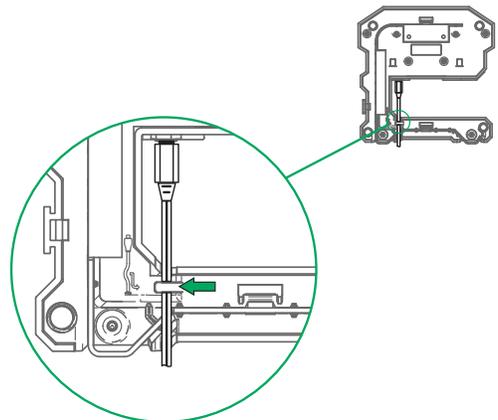

3. Slide the dock onto the wall mount until the holding tabs lock.

4. Connect the Power Supply to the jack on the Charging Dock.

5. Guide the Power Supply wire through the wire channel molded into the bottom of the Charging Dock.

The Charging Dock is now ready to use.

2 – VIN Scan In Vehicle Testing

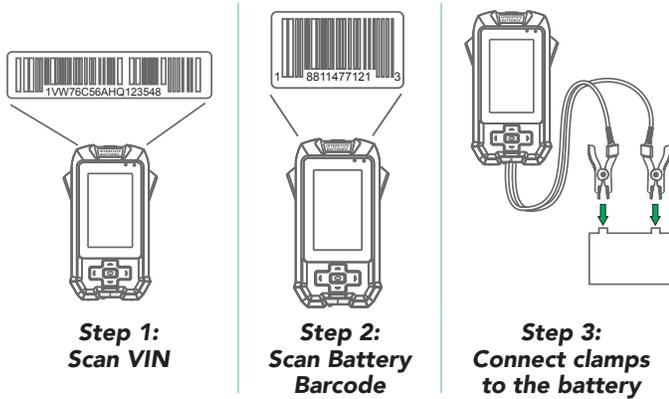

Use the IB Pulse™ to perform a battery test with two simple scans.

Scanning the vehicle VIN and battery barcodes pre-populates vehicle information and the battery information into the tester, providing the information needed to run an accurate battery test. Scanning the VIN or selecting the year, make, and model also provides:

- Battery Location Diagrams for finding the battery location within the vehicle.
- Electronics Reset Instructions to access vehicle electronics reset instructions for most major vehicle brands.
- Recommended Batteries to match and recommend batteries by part number

By default, the IB Pulse is configured to test in-vehicle automotive batteries using test parameters determined by vehicle VIN or the year, make, and model of the vehicle being tested. A System Test is also available.

Select < at any time during the test to return to the previous screen or ↶ to return to the Main Menu.

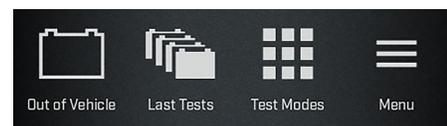

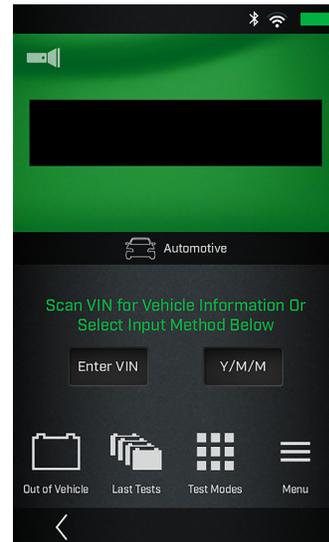

Inspecting the Battery

Visually inspect the battery before testing for the following:

- Cracked, buckled, or leaking case. If you see any of these defects, replace the battery.
- Corroded, loose, or damaged cables and connections. Repair or replace them as needed.
- Corrosion on the battery terminals, and dirt or acid on the case top. Clean the case and terminals using a wire brush and a mixture of water and baking soda.
- Low electrolyte level. If the electrolyte level is too low, add distilled water to fill to ½" above the top of the plates and fully charge the battery. **Do not overfill!**
- Corroded or loose battery tray and hold-down fixture. Tighten or replace as needed.

Battery Test

1. Power on the IB Pulse tester.
2. If the function is enabled, select a User from the displayed list.
3. If the function is enabled, enter the Job Number and select **Next >**.
4. The main test screen is displayed.

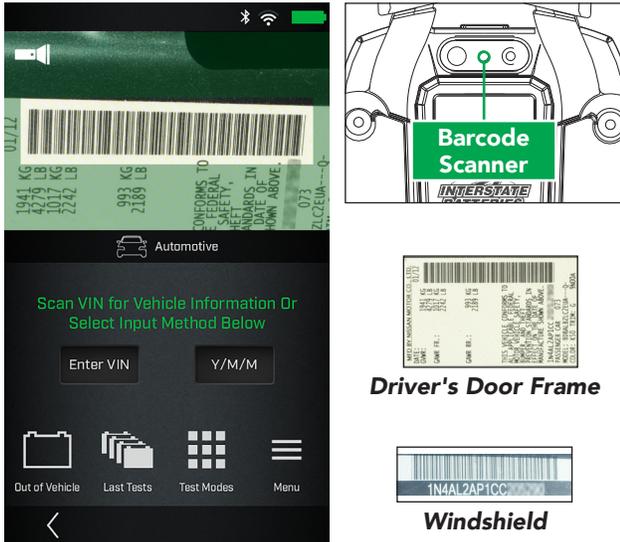

- Out of Vehicle** For testing batteries not electrically connected to a vehicle. This test bypasses VIN entry. See *Chapter 4 - Out Of Vehicle Test*.
- Last Test** Most recent test result history. Select a displayed result for specific details. Select **Full Test History** to access test totals searchable by vehicle, user, or test results.
- Test Modes**
 - Automotive (only option with IB Pulse XP)
 - Marine
 - Group 31
 - Powersports
 - Lawn & Garden
 - Commercial 4D/8D
- Menu** Access tester settings, defaults and Promotion information. See *Chapter 5 - Menu*.

5. The active Test Mode is displayed below the VIN scan window. Tap Test Modes to change it.

NOTE: Select to change the Test Mode. VIN is not used for Marine, Powersports, Lawn & Garden, and Commercial 4D/8D applications.

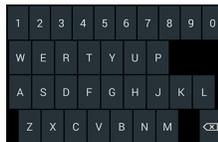

- Scan VIN or QR code. Use the camera view window to align the scanner on the back of the tool with the vehicle's VIN barcode, usually located in the right corner of the vehicle's front windshield or on the driver's side door frame.

Select the flashlight icon if more light is required.

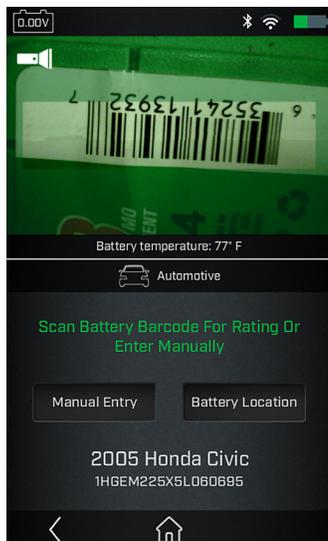

Enter VIN: VIN scan is always preferred. If necessary, use the displayed keypad to manually enter the VIN. Select **Next** > to continue.

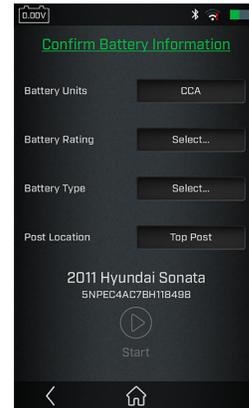

Y/M/M: Select to manually enter year, make, and model data.

- Scan the battery. Aligning the battery barcode within the camera view window and scan the battery barcode. The battery temperature is measured at the same time.

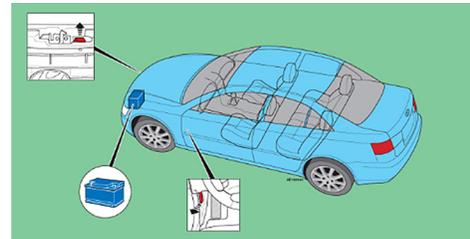

Manual Entry: If a battery barcode is not in the tester database, not scannable, or the battery data is not available, select **Manual Entry** to enter the Battery Units, Rating, Type, and Post Location.

Refer to the Appendix in back of this manual for specific battery parameter information.

Battery Location: Select **Battery Location** to display the battery location in the vehicle based on vehicle year, make, and model determined by the scanned VIN or information entered manually.

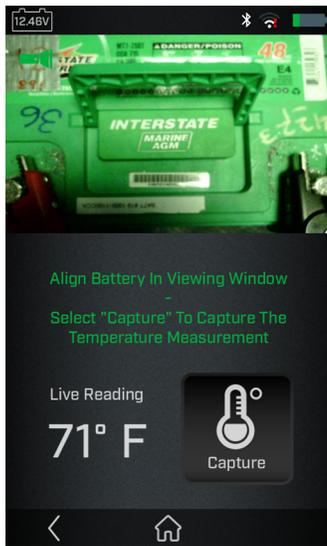

- Connect the IB Pulse clamps to the battery posts and select **Start**.

IMPORTANT: If the entered VIN is a start-stop vehicle and the IB Pulse has been paired to a IB Pulse XP module, connect the IB Pulse XP to the battery.

The IB Pulse XP module is paired to the IB Pulse using a Bluetooth connection. See *Chapter 2 - VIN Scan In Vehicle Testing*.

- If prompted, capture the battery temperature.

Align the battery within the camera view window and hold the sensor on back of tester 6 to 12 inches from battery surface.

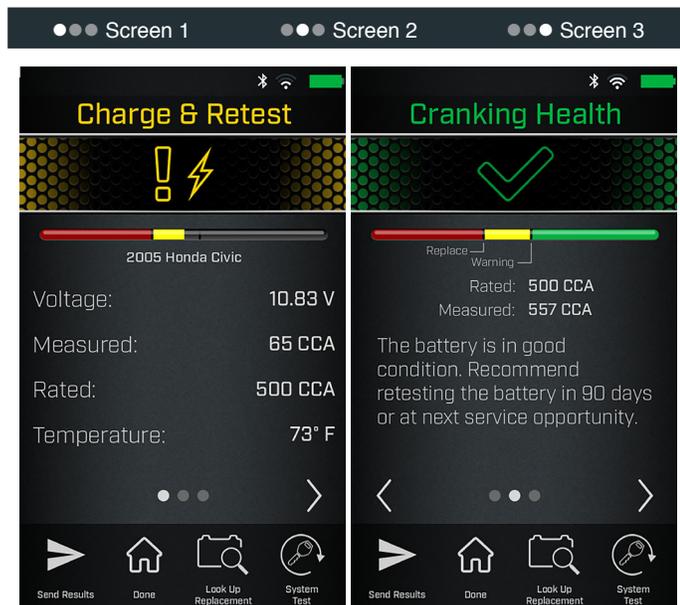

10. Tap Capture to capture the live reading temperature and begin the test.

Battery Test Results

Use < and > to view the battery test results, cranking health, and the test record for the vehicle tested.

The dots at the bottom of the results screen indicate additional screens are available. Use < or > to move between screens.

	Via email or through a configured printer.
	Exit the test and return to the Home Screen. For Replace Battery decisions, select to continue or to access the Reset Electronics checklist.
	Select to display recommended replacement batteries.
	Continue to the System Test.

Battery Decisions

Decision	Description
Good Battery	The battery is in good condition. Recommend retesting the battery in 90 days or at next service opportunity.
Good Recharge	Battery good, but low on charge. Fully charge for optimal performance and life. Check for causes of low charge.
Good - Recheck Soon	The battery performance has started to decline and may fail to start the vehicle. Consider replacing the battery before it is exposed to temperature extremes.
Charge & Retest (Analysis Unavailable)	State of charge too low for diagnosis. Fully charge & retest.
Replace Battery	Battery no longer meets minimum standards & replacement is recommended. It is likely to fail soon, especially if exposed to temperature extremes.
Frozen Battery	Completely thaw battery before retesting, charging or starting the vehicle. See Danger warning below.
Bad Cell – Replace	Bad cell detected. Replace immediately. See Danger warning below.

⚠ DANGER

Risk of explosive gases. Can cause death or serious personal injury.

Never attempt to charge a frozen battery or a battery with a bad cell. The battery must be replaced.

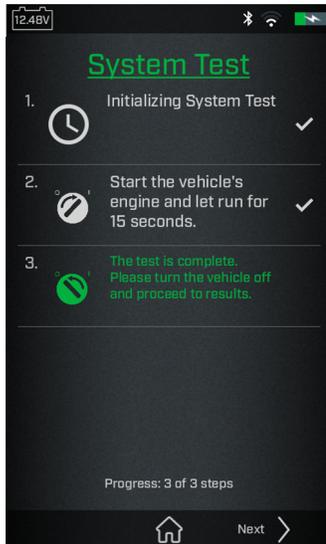

System Test

System Test

For the System Test, follow the instructions displayed on the IB Pulse tester screen.

1. After the System Test is initialized, start the vehicle's engine when prompted and leave it running for 15 seconds.
The IB Pulse will detect the engine start and analyze the cranking voltage and time.
2. Turn off the engine when prompted.

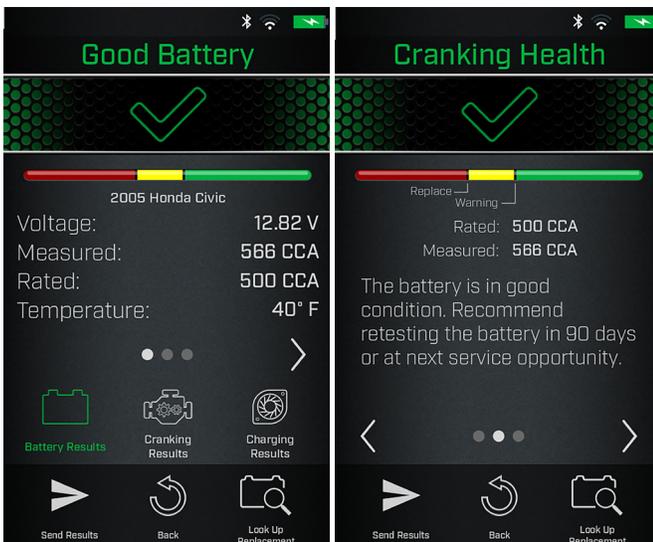

System Test Results

Use **< and >** to view the battery test results, cranking health, and the test record for the vehicle tested.

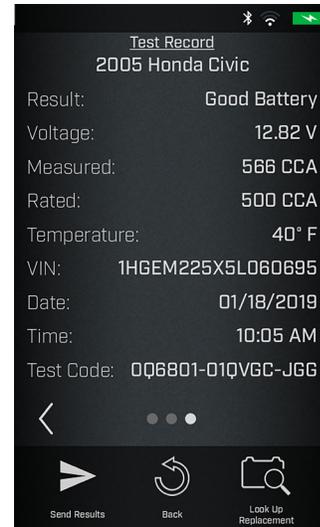

The dots at the bottom of the results screen indicate additional screens are available. Use **<** or **>** to move between screens.

Battery Results

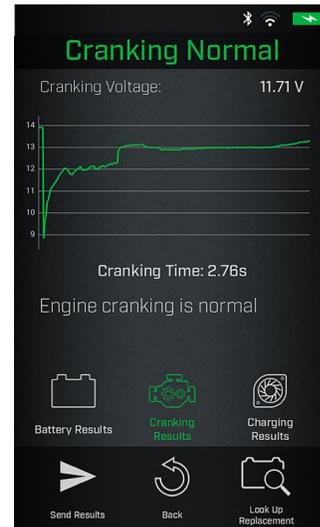

Battery Results (cont.)

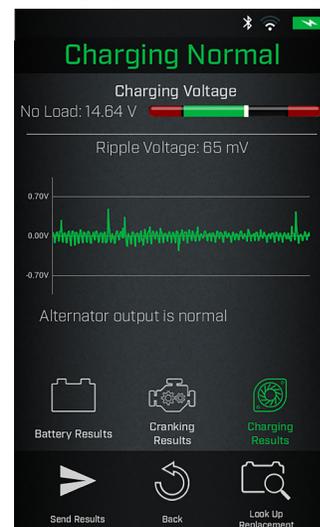

Cranking Result

Select to view the Cranking Voltage results.

Charging Result

Select to view the Charging and Ripple Voltage test results.

Cranking Health Decisions

Decision	Action
Cranking Normal	Starter voltage normal & battery is fully charged.
Low Voltage	Starter voltage low & battery is fully charged.
Charge Battery	Starter voltage low & battery is discharged. Fully charge & repeat test.
Replace Battery	For REPLACE or BAD CELL, replace battery before testing starter.
No Start	Engine didn't start & test was aborted or vehicle starting profile not detected & Starter Test was skipped.

Charging Health Decisions

Decision	Action
Charging Normal	The output from the alternator is normal.
No Output	<p>No output detected. Check belts to ensure alternator is rotating when engine is running.</p> <ul style="list-style-type: none"> Check all alternator connections including to the battery. Clean or replace if necessary and retest. If the belts and connections are in good working condition, replace alternator or external voltage regulator.
Low Output	<p>Alternator not providing enough current to power electrical loads and charge the battery.</p> <ul style="list-style-type: none"> Check belts to ensure the alternator is rotating with the engine running. Check alternator connections to and from the battery. If loose or heavily corroded, clean or replace the cable and retest.
High Output	<p>Alternator voltage to the battery exceeds normal limits of a functioning regulator.</p> <ul style="list-style-type: none"> Check for loose and normal ground connections. If no connection problems are found, replace the regulator. <p>The normal high limit of a typical automotive regulator is 14.5 volts +/-0.5. Refer to the manufacturer specifications for the correct limit, which may vary by vehicle type.</p>

Battery Replacement

The Battery Replacement option is given following a Replace Battery decision. Use Battery Replacement to access the Reset Electronics checklist and to look up correct replacement Interstate battery options.

- Select **Done** following a Replace Battery decision. The option to replace the battery is given.

Battery Replacement can also be accessed through the Last Test function when Replace Battery is selected.
- Select **Yes** to continue.

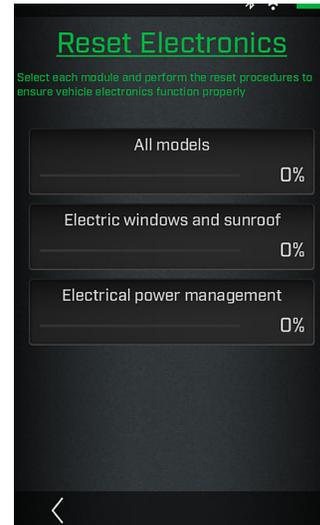

Based on the entered VIN, any battery replacement notices and warnings are displayed.

Reset

Displays a checklist of vehicle-specific procedures to ensure the vehicle electronics are functioning properly following the installation of a new battery.

- Select .
- Select each module and perform the reset procedures to ensure the vehicle electronics function properly.

- Check each item in the list after it has been completed.
- Select to go back to the Reset Electronics screen.

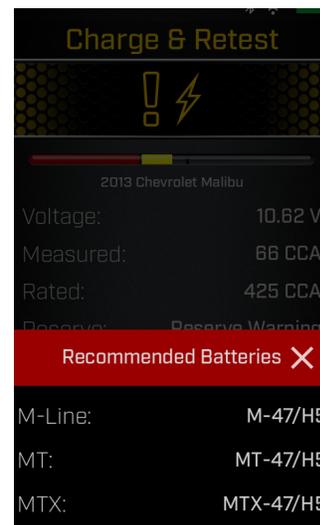

Lookup Replacement

Displays a list of recommended replacement batteries based on the entered data during the testing process.

- Select the Reset icon.

A list of recommended replacement batteries based on the entered VIN is displayed.

- Tap **X** to close the window and return to the Battery Replacement screen.

3 – Out Of Vehicle Test

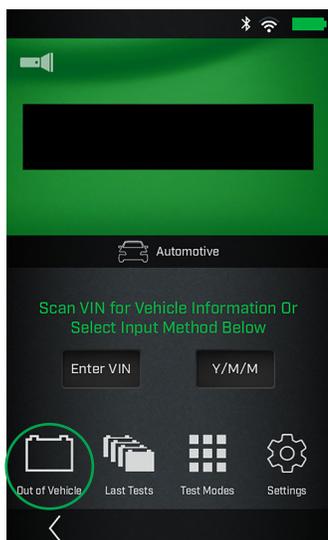

Use Out Of Vehicle Test to perform tests on batteries disconnected and/or removed from a vehicle, using test parameters determined by the scanned barcode on the battery. Battery parameters can also be entered manually.

Select < to return to the previous screen or Home to return to the Main Menu at any time during the test.

Battery Test

1. Connect the IB Pulse tester clamps to the battery terminals.
2. At the Home Screen, select a User from the displayed list.
3. At the main testing screen select the Out of Vehicle icon.

4. Scan the battery barcode. The battery temperature is measured at the same time.

If a battery barcode is not available, tap **Manual Entry** to enter the Battery Units, Rating, Type, and Post Location.

If prompted, capture the battery temperature by holding the sensor on back of tester 6 to 12 inches from battery surface and tap .

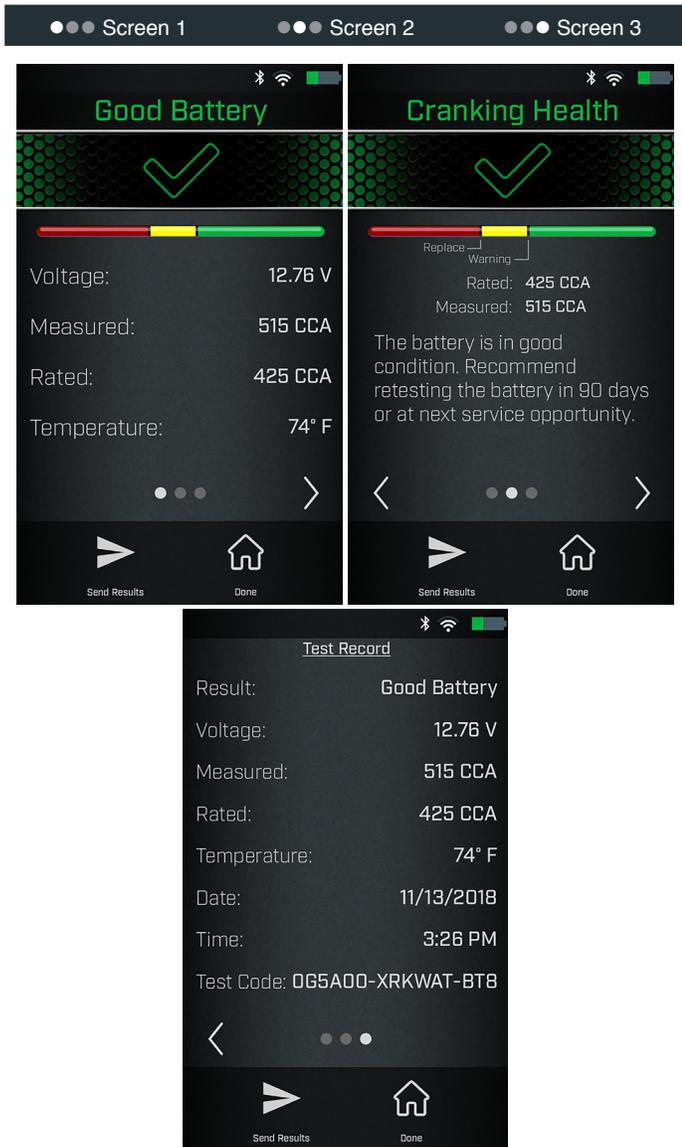

The test begins once the battery temperature is captured.

Battery Test Decisions

Decision	Description
Good Battery	The battery is in good condition. Recommend retesting the battery in 90 days or at next service opportunity.
Good Recharge	Battery good, but low on charge. Fully charge for optimal performance and life. Check for causes of low charge.
Good – Recheck Soon	The battery performance has started to decline and may fail to start the vehicle. Consider replacing the battery before it is exposed to temperature extremes.
Charge & Retest	State of charge too low for diagnosis. Fully charge & retest.
Replace Battery	Battery no longer meets minimum standards & replacement is recommended. It is likely to fail soon, especially if exposed to temperature extremes.
Frozen Battery	Completely thaw battery before retesting, charging or starting the vehicle. See Danger warning below.
Bad Cell – Replace	Bad cell detected. Replace immediately. See Danger warning below.
⚠ DANGER	
Risk of explosive gases. Can cause death or serious personal injury.	
Never attempt to charge a frozen battery or a battery with a bad cell. The battery must be replaced.	

Battery Test Results

Use < and > to view the battery test results, cranking health, and the test record for the vehicle tested. The dots at the bottom of the results screen indicate additional screens are available. Use < or > to move between screens.

 Via email or through a configured printer.

 Exit the test and return to the Home Screen.

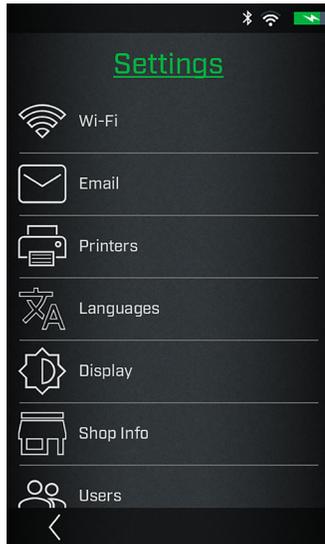

4 – Menu

Settings

Settings

Use the Settings functions to adjust and customize the IB Pulse to match shop requirements. Select **<** to return to the previous screen. Swipe up or down on the screen to scroll, or use **▲** or **▼** on the keypad.

Wi-Fi

Use Wi-Fi to view, add, and delete all available Wi-Fi Hub connections.

Select  to access Wi-Fi Hub functions.

Wi-Fi Hub Connected

Wi-Fi Communicating

Add: Add a detected Wi-Fi Hub

Reload: Re-scan for detectable Wi-Fi Hubs

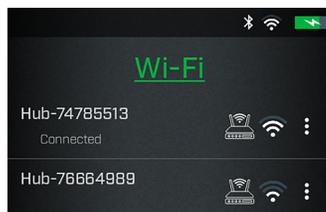

Additional Menu Options

Adding A Wi-Fi Network

1. Select  to add a Wi-Fi Hub.

A list of detected wireless networks is displayed. The  icon indicates a Wi-Fi Hub.

2. Select a displayed Wi-Fi Hub. The IB Pulse will automatically configure the tester to the Wi-Fi Hub.
3. Select **Next >** to return to the Wi-Fi screen. The selected Wi-Fi Hub is displayed.

Deleting A Wi-Fi Network

1. Select  next to a displayed network.
2. Select  to delete the network and select **Yes** to confirm.

Email

Add, edit, and delete email addresses used for test results.

Select  to access Email functions.

Select/Deselect Favorite

Additional Menu Options

Add Email

Auto Email

Delete Selected Address

Edit Address

Send Test Email

Auto Email

1. Select  to view the list of entered email addresses.
2. Select an addresses to automatically send test results. A green dot indicates the selected address.
3. Select **X** to exit and return to the email list.

Add Email Address

1. Select  to add an email address.
2. Use the displayed keypad to enter the contact name and email address.
3. Select  to add the address to the email list or Cancel to exit and return to the email list.

Edit Email Address

1. Select  next to a displayed email address.
2. Select  to edit the address.
3. Use the displayed keypad to edit the contact name and email address.
4. Select  to add the address to the email list or Cancel to exit and return to the email list.

Deleting An Email Address

1. Select  next to a displayed email address.
2. Select  to delete the address and tap Yes to confirm or Cancel to exit and return to the email list.

Favorites

1. Tap  to select an email address add it as a Favorite.
2. Tap  to deselect and remove a Favorite email address.

NOTE: A maximum of three (3) email addresses may be selected as Favorite.

Printers

The Printer Setup function detects and displays a list of connected and available Wi-Fi and Bluetooth printers. Select to access the Printer Setup functions.

NOTE: To connect a Wi-Fi printer, Wi-Fi network communication must be successfully established before any printers can be detected and setup.

	Additional Menu Options		Add Printer
	Delete Selected Printer		Auto Print
	Printer Setup		Bluetooth Printer
	Print Test Page		Wi-Fi Printer

Auto Print

1. Select to view a list of connected printers.
2. Select one of the displayed printers to automatically print-out test results at the conclusion of a successful test. A green dot indicates the selected printer.
3. Select **X** to exit and return to the printer list.

Add Printer

1. Select to add a Wi-Fi or Bluetooth printer.
2. Select the printer type, Wi-Fi or Bluetooth.

For A Wi-Fi Printer

- The IB Pulse must be connected to the same shop Wi-Fi network as the Printer
- The printer is Wi-Fi capable
- The printer is supported by the IB Pulse

NOTE: Not all Wi-Fi and Bluetooth printers are supported by the IB Pulse. For a complete list of supported printers, go to: www.interstatebatteries.com/ibpulse

Select Use Email Address or Continue to Wi-Fi.

For Email Address: Enter the Name and Email Address of the target printer and select Next to add it to the Printer list.

For Wi-Fi Printer: Confirm the following.

- The Wi-Fi printer is powered up
- The IB Pulse is connected to the same Wi-Fi network.
- The selected Wi-Fi network as internet access.

NOTE: A Warning message is displayed if no Wi-Fi printer has been detected on the Wi-Fi Hub being used by the IB Pulse. Tap Settings to select a different Wi-Fi Hub or add a new Hub. See Settings/ Wi-Fi in this chapter for additional information.

After the IB Pulse adds the printer, it will switch back to the HUB network.

NOTE: A test print can be completed by selecting next to the printer name in the printers list.

NOTE: Refer to the Wi-Fi Printing section in the Appendix of this manual for additional Wi-Fi printer connection information.

For a Bluetooth Printer: Power on the printer and make sure it is within 10 feet of the IB Pulse tester.

3. Select **Next >** to connect to the selected printer. A message is displayed when the configuration is successful.
4. Select **Next >** to return to the printer list.

Deleting A Printer

1. Select next to a displayed printer.
2. Select to delete the printer and tap Yes to confirm.

Default Printer

Select to select a default printer from the displayed list.

If any of the printers are set for Autoprint, the Battery and System Test results are automatically printed out at the end of each completed test.

Languages

Select the default language for System, Test Results, Email, and Print functions.

Select to access the Language settings.

System Language

Select the technician System Language default for the IB Pulse to display on the tool screen.

Test Result Language

Select the Test Result language default for all tests and results displayed on the tester screen.

Email Language

Select the default language for all tests and results sent via email.

Print Language

Select the default language for all tests and results printed using a configured printer.

Display

Adjust the IB Pulse display including the Brightness, Sleep Time, and Dim Time. Auto Brightness can also be turned on and off.

Select  to access the Display functions.

Brightness

Adjust the display Brightness by tapping and holding the slider, then moving it right or left to make the screen brighter or darker.

Auto Brightness

Enable and disable Auto Brightness by taping on the check box.

Sleep Time

Adjust the amount of elapsed time before the IB Pulse goes into a power saving (Sleep) mode. Default = 2 minutes.

Dim Time

Adjust the amount of elapsed time before the IB Pulse goes into a power saving (Dim) mode. Select :30 seconds, 1 minute, or Never. Default = :30 seconds.

Shop Info

Access default Shop Information including Store Name, address, and phone number.

Select  to access the Shop Info.

Use the on screen keypad to enter the store name, address, and phone number.

The screenshot shows the 'Shop Info' screen with the following fields and keyboard:

- Store Name:** Input field with placeholder 'Store Name'.
- Street Address:** Input field with placeholder '123 Any St.'.
- Street Address 2:** Input field with placeholder 'Line 4'.
- City:** Input field.
- Keyboard:** On-screen keyboard with keys for letters, numbers, and a 'Next' button.

Users

Add, edit, or delete Users.

Select  to access Users functions.

Edit Users

Additional Menu Options

Delete Users

Add User

1. Select  to add a User.
2. Use the on screen keyboard display to enter a User Name.
3. Select **Done** or **Next** >.
4. The new User name is displayed on the Users screen.

Editing A User

1. Select  next to the User to be edited.
2. Select  to edit the User Name.
3. Use the on screen keyboard display to edit the User Name.
4. Select **Done** or **Next** >.
5. The new User name is displayed on the Users screen.

Deleting A User

1. Select  next to the User to be deleted.
2. Select  to delete the selected user.

The deleted User name is removed from the displayed list.

Date Time

Adjust the IB Pulse Date and Time format and the Time Zone in which the tester will be used. The date and time can also be set. Select the boxes to change the values.

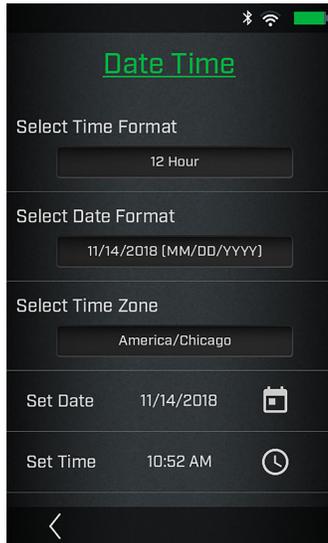

Select to access Date Time functions.

Tap to access. Scroll up/down to set the day, month, and year

Additional Menu Options

Select Time Format

12 or 24 hour format

Select Date Format

MM/DD/YYYY	Month/Day/Year
DD/MM/YYYY	Day/Month/Year
YYYY/DD/MM	Year/Day/Month

Select Time Zone

Time zone in which the IB Pulse tester is being used.

Set Date

Select ▲ or ▼ to enter the month, day, and year. Select Done to exit.

Set Time

Select ▲ or ▼ to enter the hours, minutes, and AM/PM. Select Done to exit.

Select < to return to the Date Time screen.

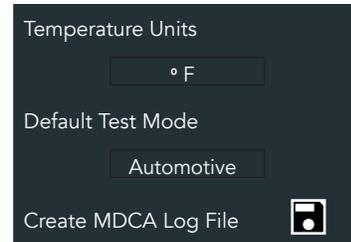

Test Settings

Set the default Test Settings for Temperature Units and Test Mode.

Select to access the Test Settings defaults.

Select the boxes to change the values.

Temperature Units

Default temperature units used when measuring battery temperature.

Default Test Mode

The selected test default: Automotive, Marine, Group 31, Powersports, Lawn & Garden, Commercial 4D/8D

Create MDCA Log File

The MDCA function is used for technical support purposes.

Select < to return to the Test Settings screen.

Software Update

Use this function to check via the Internet connection for any updates to the tester software.

Select to check for any software updates.

NOTE: Wi-Fi network communication must be successfully established before a software update can proceed.

Relocation Mode (Admin Only)

Use this function to return the tool to the original as built configuration including all history and test settings.

Select to activate Relocation Mode.

IMPORTANT: All previous modifications to the original settings will be overwritten.

About

Promotions

Promotions

The Promotions displayed on the IB Pulse are created and controlled by Interstate Batteries. Users do not have the ability to delete or change any promotion or promotion schedule.

- Promotions can be automatically displayed whenever a user logs into the IB Pulse.
- More than one Promotion can be active at one time.
- Every promotion has a specific start and end date.
- View all active Promotions at **Menu -> Promotions**. Expired Promotions are removed and cannot be displayed.
- Promotions can be setup for a specific number of displays for each user. For example, a Promotion will display for the first five days a user logs into the IB Pulse, but still valid beyond that time.
- Promotions can also be emailed or printed using a Wi-Fi printer. Promotions emailed or printed prior to expiration, are invalid after the expiration date.

NOTE: Promotions cannot be printed using a Bluetooth printer.

Promotion Samples

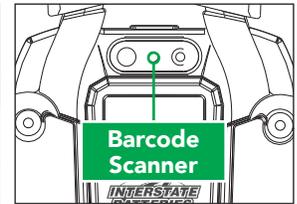

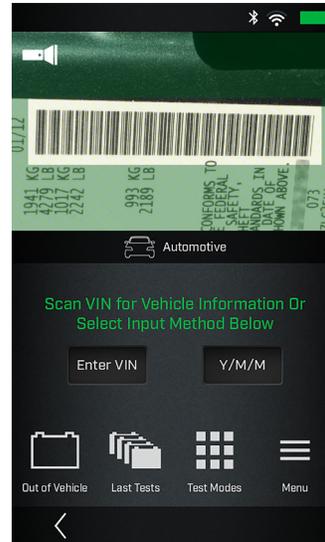

Appendix

Battery Information Screen Descriptions

VIN	A unique code, including a serial number, used by the automotive industry to identify individual motor vehicles, motorcycles, scooters and mopeds, as defined in ISO 3833.	
Vehicle Year	Model year that a vehicle was manufactured.	
Vehicle Make	Vehicle manufacturer	
Vehicle Model	Vehicle name or number	
Battery Installation	Single Battery or Dual Batteries	
Battery Application	Automotive, Marine, Powersports, Group 31, Commercial 4D/8D, Lawn and Garden	
Battery Post	Top Post, Side Post, Dual Post	
Battery Type	Flooded, AGM (Absorbed Glass-Mat), AGM Spiral	
Battery Units	CCA	Cold Cranking Amps: Battery current at 0 °F (-17.8 °C). 100 to 3000
	CA	Cranking Amps: Battery current at 32 °F (0 °C). 100 to 3000
	EN	Europa-Norm 100 to 1700
	DIN	Deutsches Institut für Normung 100 to 1000
	IEC(A)	International Electrotechnical Commission 100 to 1000
	SAE	European labeling of CCA 100 to 3000
	JIS	Japanese Industrial Standard: Usually printed on battery label. 26A17 to 245H52
Battery Rating	Enter the Battery Rating Units value.	

Scanning Tips

- **Barcode Scanner:** Located on the back of the tester in between the clamp holsters.

Driver's Door Frame

Windshield

- **Hold Steady:** Hold the tester steady when scanning the VIN barcode. This allows the user to clearly see the barcode and allows the scanner to focus on it.
- **Clean Barcode/Windshield:** Surface dirt can interfere with the scanning process. If necessary, wipe the VIN barcode with a cloth or your finger remove any surface dirt.
- **Lighting/Glare:** If sunlight is shining directly onto the VIN barcode, try pivoting the scanner up or down slightly to reduce any glare.

Tap the flashlight icon if more light is required.

Flashlight On

Flashlight Off

Wi-Fi Printer Setup/Troubleshooting

The following troubleshooting information is not inclusive and is meant as a guide only. Other issues and solutions may arise that are not stated here. The following description of terms are provided for reference as used in the following troubleshooting chart:

Issue	Probable Cause(s)	Remedy
No printers are listed when searching for Wi-Fi printers	Printer is turned off	Power up the printer and restart setup process
	Printer is connected to a different network than the IB Pulse	Connect the IB Pulse to the same wireless network as the printer or connect the Wi-Fi printer to the same wireless network as the IB Pulse
	No printers are configured on the selected network	Choose a different Wi-Fi network with printer already configured, or add a Wi-Fi printer to the selected network
	Wireless network is down	Retry when wireless network is up and functioning
	Wireless signal is weak	Move closer to the Wi-Fi network access point
	Printer is not supported by the IB Pulse	For a complete list of supported printers, go to www.interstatebatteries.com/ibpulse
Unable to send a test record to the Wi-Fi printer (error message will be displayed by the IB Pulse)	Printer is turned off	Power up the printer and attempt to print the test record again
	Printer has been connected to a different Wi-Fi network	Follow the Wi-Fi printer setup instructions above to re-add the Wi-Fi printer to the IB Pulse
Test records are not printing when successfully sent to a Wi-Fi printer	Printer is out of paper	Add paper to the paper tray
	Printer low on ink or toner	Replace ink or toner cartridges Go to the Print Hand website

Product Specifications

IB Pulse

IB Pulse	Includes: Pulse Tester, 3' test cables, charging/storage dock, AC power adapter
Application	6V & 12V Batteries 12V & 24V Charging/Starting System Automotive, Group 31, Lawn & Garden, Marine, Powersports, Commercial 4D/8D Batteries
Rating System	CCA • CA • JIS • DIN • SAE • IEC • EN
Battery Type	Regular Flooded, Gel, AGM Flat Plate, AGM Spiral, Enhanced Flooded (EFB), AGM (Start-Stop)
Operation Range	100 - 3000 CCA (SAE)
Voltmeter	1.5V - 35V via Battery Clamp
Detachable Test Leads	3' (Field Replaceable)
Operating Range	0° - 50° C (32° F - 122° F)
Languages	English, Canadian French, Latin Spanish
Test Discharged Batteries	Down To 1.5V
Display	5" Diagonal Color Touchscreen (Portrait Orientation)
Housing Material	High-impact ABS-PC blend plastic with durable TPE over-molded rubber
Dimensions	5.5" (W) x 8.9" (L) x 2.6" (D)
Weight	2.1 lbs
Wireless Communications	Class 2 Bluetooth
Wi-Fi Communications	2.4 Ghz 802.11 b, g, n
Internal Battery	Rechargeable lithium-ion battery pack
Features	Color touchscreen & 5 button navigation keypad Camera w/ flashlight for automotive barcode and VIN scanning Battery location diagrams ¹ Provides recommended battery part numbers Fully customizable printout Temperature sensor ¹ Not available for all cars
